### **DETAILED ACTION**

1. This office action is in response to the amendment filed on January 23, 2004. With the cancellation of *claims 1-6, 18-20 and 18-48*, *claims 7-17, 49* are now pending in the application. In view of the amendment, objection to *claims 7-17* as being dependent on a rejected claim is moot.

### **EXAMINER'S AMENDMENT**

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. John D. Carpenter on February 12, 2004.

3. The application has been amended as follows:

*Cancel claims 14-17* as the subject matter in the claims is redundant in the amended *claims 8-13*.

The application is also amended to accommodate changes in claim numbers as follows:

- In line 1 of original *claim 8* (final claim 2), change "claim 7" to "claim 1".
- In line 1 of original *claim 9* (final claim 3), change "claim 7" to "claim 1".

- In line 1 of original **claim 10** (final claim 4), change “claim 7” to “claim 1”.
- In line 1 of original **claim 11** (final claim 5), change “claim 7” to “claim 1”.
- In line 1 of original **claim 12** (final claim 6), change “claim 11” to “claim 5”.
- In line 1 of original **claim 13** (final claim 7), change “claim 7” to “claim 1”.

***Allowable Subject Matter***

4. **Claims 7-13, 49** are allowed.
5. The following is an examiner’s statement of reasons for allowance:

The present claims are allowable over the closest reference: Baumstark et al. (US 5,774,540).

The present claims are in regard to a composition comprising an acrylic copolymer formed from a plurality of monomers consisting essentially of about 5 to 90% butyl acrylate, about 90% to 5% methyl methacrylate, about 1 to 5% hydroxypropyl acrylate, about 0.1 to 0.5% tetraethylene glycol diacrylate, about 0.1 to 2% methacrylic acid, and about 0.5 to 2% 3-allyloxy-2-hydroxypropylaminoethylene urea; a particulate filler and a mordant (**claim 7**).

The disclosure of Baumstark et al. is in regard to an aqueous polymer emulsion comprising a copolymer of hard monomers, soft monomers, and nitrogen-containing adhesion-promoting monomers. The main part of the monomer composition comprising hard and soft monomers accounts for more than 50% by weight, based on the monomer composition. The monomers may be selected exclusively from the following monomers : n-butyl acrylate, 2-

Art Unit: 1713

ethylhexyl acrylate, ethyl acrylate, methyl methacrylate, n-butyl methacrylate, styrene, acrylic acid, methacrylic acid, hydroxyl propylacrylate etc. Water-soluble monomers such as acrylic and methacrylic acid may be present in an amount of from 0.1 to 5%, by weight (column 5, lines 30-37). Crosslinking agents such as alkylene glycol diacrylates and dimethacrylates may be used in an amount of 0.01 to 5% by weight. The disclosure further includes that the monomer compositions may include from 0.5 to 5% by weight, of monomers which do not affect crosslinking until during film formation. Examples of monomers suitable for post crosslinking include hydroxyethyl and hydroxypropyl acrylate and methacrylate are also suitable for post crosslinking. The monomer composition further includes as adhesion promoting monomers, monomers having at least one amino, ureido or N-heterocyclic group. Typical examples of polymerizable ureido monomers disclosed include N-(3allyloxy2-hydroxypropyl) aminoethyleneethylurea, N-(methacrylamidoethyl)ethyleneurea etc. The ureido monomer is polymerized in an amount from 0.1 to 10% by weight, based on the total amount of monomers to be polymerized. The present invention relates to compositions comprising **copolymers consisting essentially of the disclosed monomers in the claimed ranges, a particulate filler and a mordant**. Prior art compositions do not teach or suggest the specific additives or include the specific monomer composition containing triethylene glycol diacrylate and a ureido functional monomer.

Therefore, the instantly claimed invention is deemed allowable over the closest prior art of record as per said art neither anticipating nor rendering obvious the instantly claimed one-component self-adhesive resin based on vinyl polymers in an aqueous medium and a system comprising the adhesive.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
